the doctors believe that this is too late. 68% of the doctors agree that the society does not have enough knowledge about dementias.

50 patients' caregivers completed the surveys: 26% - AD, 28% - vascular dementia, 46% - non-defined. The first contact with their doctors varied greatly among different dementia patients: AD - waited for 2.8 y, vascular dementia – 1.46 y, non-defined – 0.87 y. Even though patients' caregivers indicated that they received enough information from their doctor, they admitted that they had no or not enough knowledge concerning the disease before. They also highlighted that it was hard to find information in Lithuanian language.

Conclusion: The research showed that people do not have enough knowledge about dementias and have limited access to information. This is one of the main reasons why the diagnostics is late. Considering the mental health is a stigmatic topic in the world, the fact that people do not know about the dementias might be the problem in the whole world.1

Obsessive-compulsive behaviour tendencies among medical students in Poland

Zuzanna Goetz *, Ewa Żelnio

Medical University of Warsaw, Outpatient Psychiatric Association for medical students at the NZOZ Centrum Terapii DIALOG, Poland
E-mail address: zuzannagoetz@gmail.com (Z. Goetz).

Aim: Determination of a need for educational program, focused at students' knowledge and awareness of OCD.

Introduction: As medical students, we are familiar with terms such as professional burnout and workaholism on an every day basis. However other psychiatric disorders seem to be still stigmatized and not well perceived for this profession. It does not mean that they do not exist among future physicians.

Gabbard and Mayers believed that perfectionism is one of the most common personality traits for medics. Moreover, they assumed that perfectionistic physician might perform more often "obsessive triad". Namely: self-doubt, guilt feelings, exaggerated sense of responsibility. Those personal features can lead to obsessive-compulsive behaviour. Authors also suggest that those traits are already widely pre-existing for medical students. How-
